With a subscription to ECG’s CPT Code Profiler, your organization receives access to reports and online benchmarking and graphing tools that can be customized, including:

- **Specialty practice profile summary reports**
  - Identify variances in practice profiles for providers in the medical group and the market, with key metrics including:
    - Procedure subcategories
    - Average acuity of procedures

- **Provider E&M distribution reports by specialty**, including:
  - Total RVUs (TRVU)
  - Distribution of volumes, WRVUs, and TRVUs by procedure category and subcategories

- **Provider CPT code frequency reports**
  - Gain an understanding of the top codes at the specialty, provider, and market levels with data sets customized by:
    - Procedure categories
    - Type of Service, inpatient and outpatient procedures, and medical group demographics
    - Key practice differentiators

- **Provider E&M distribution reports by specialty**, including:
  - Office, inpatient, and emergency department visits
  - Distribution reports include the isolation of E&M frequency by place of service and provider and organization demographics

- **Specialty practice profile summary reports**
  - Identify variances in practice profiles for providers in the medical group and the market, with key metrics including:
    - Work RVUs (WRVU)
    - Total RVUs (TRVU)
    - Distribution of volumes, WRVUs, and TRVUs by procedure category and subcategories
    - Average acuity of procedures

We also offer reduced rates for volume orders. Contact us today to learn more about ECG’s CPT Code Profiler and how it can benefit your organization.
ECG’s CPT Code Profiler gives access to CPT code data in 127 physician specialties and 13 types of APPs.

The profiler enables users to generate reports that allow for a better understanding of the impact of physician and advanced practice provider CPT coding on practice economics, in addition to helping identify where changes and improvements may be warranted.

Our CPT Code Profiler

- Aids in the analysis of individual providers’ procedure codes and encounter type distribution, including new and established patient visits and consultations.
- Compares individual coding profiles and performance to the overall market.

The CPT Code Profiler is built from ECG’s proprietary compensation and production surveys, wherein we calculate productivity from CPT code–level data. It uses clear, uniformly applied definitions and a structured data validation process to transform member responses into useful information. RVU metrics for our surveys are calculated and published using the Medicare Physician Fee Schedule. To ensure data accuracy, we define each provider’s clinical and nonclinical full-time equivalents in detail.
